

How to use My App

Screen One

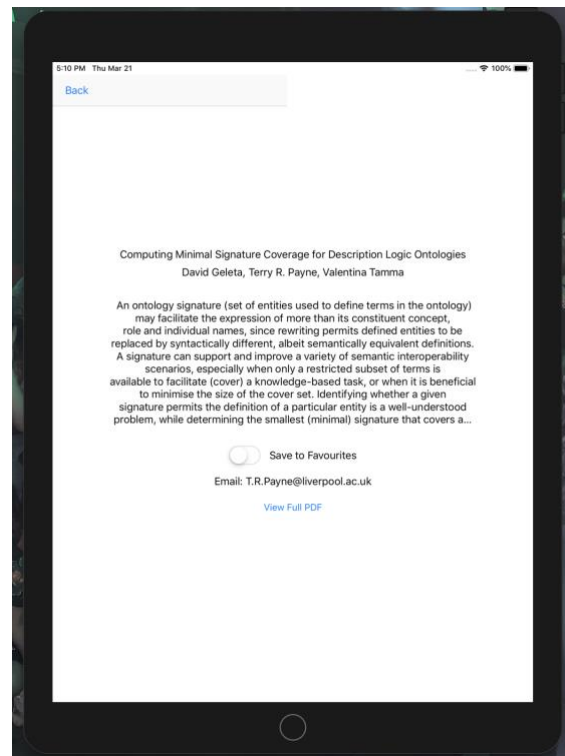

This is the opening screen when you first open the app.

You can scroll down to look and choose which article you would like to choose.

When you find one you would like to look at just tap it and it should bring you to the next screen.

Screen Two

This is the next screen that will come up when you choose an article, it will display the title, authors and an abstract if it is available. There is a label with the authors email if it has been provided.

There is also the switch which should save the document to your favourites, but mine doesn't do anything so is just something fun to play with. The View PDF Button brings us to safari and opens the full document for you to read.

Screen Three
